

PRESS RELEASE**February 2022****FEIN unveils MACH plans to support metalworkers**

Power tools and accessories manufacturer, [FEIN](#), will be showcasing its brand new KBE 32 metal core drill, new additions to its beveller range and its MKAS 355 metal chop saw at MACH 2022, demonstrating its commitment to supporting metalworkers by providing solutions to the everyday challenges they face.

Exhibiting at the event, which takes place at the NEC, Birmingham between 4th-8th April, the manufacturer will also be displaying a number of other tools from its vast portfolio of products for metalworkers including, multiple standard frequency grinders, its CCG cordless angle grinder range and several tools from its Accutec precision cordless screwdriver range.

“We're excited to be at MACH's first show in four years and to be unveiling our commitment to supporting metalworkers. At FEIN, we pride ourselves on our application-based approach and providing trusted consultancy to our customers, which ultimately enables them to source the best solution for the job.

“Research we conducted last year revealed many metalworkers are using tools that aren't fit-for-purpose, which is having a detrimental impact on health and safety, efficiency and productivity. For this reason, our ethos centres on matching people with the right tools for the right applications and we're excited to share more details on exactly how we do this, while showcasing our commitment to innovation with the various new tools we'll be exhibiting,” comments Andy Mills, managing director, FEIN UK.

With a 1200-watt high-power motor for reliable drilling up to 32 mm, FEIN's new KBE 32 metal core drill is the most powerful tool in its class. The KBE 32 is the first tool ever to combine a weight of 10.8 kg with 1200-watt, offering a ground-breaking power-to-weight ratio with high magnetic holding force, ensuring hard work is easy yet safe.

Integrated with FEIN technology, coupled with tried and tested milling heads, the manufacturer's beveller range provides superior precision, as well as enhanced health and safety at work by producing swarf as a waste product. Unlike the dust produced with angle grinders, this falls onto the ground and doesn't circulate in the air. New booster technology deployed in FEIN's KFH 17-15 beveller also delivers 30–80% more cutting with significantly reduced vibrations.

The new MKAS 355 metal chop saw is now available across the UK and delivers precise rapid

results when cutting metals both in the workshop or on-site. The cold cutting process means the material isn't as heated, resulting in no metal dust extract to ensure maximum safety for end users. The saw also includes a powerful 1800-watt motor with soft start technology, alongside an ergonomic handle design to combine comfort, safety and power.

"We have several pioneering new tools we're excited to unveil. From those operating across automotive, general fabrication or machinery manufacturing, to those in offshore/shipbuilding, rail, steel production or sheet metal industries, our vast portfolio covers a wide range of tasks and several different performance classes," continues Andy.

With over 150 years' experience in manufacturing power tools, FEIN has a proud history of innovation and provides high levels of support to dealers, along with application-based solutions for end-users in the metalworking and construction sectors.

"Our team of experts on the stand will be able to offer personalised advice to help provide solutions to any challenges attendees across the metalworking sector may be facing, with the current tools they have access to. To find out more, drop by the exhibit hall at MACH, stand 6-572 in the welding zone," Andy concludes.

About FEIN

FEIN is the specialist brand of quality and reliable power tools and accessories for the metal working and interior sectors. As the inventor of the first electric hand held power tool, FEIN has been developing innovative and unbeatably efficient solutions for everyday use by industry and manual trades for over 150 years, and now has a wide range of power tool products. FEIN also offers an extensive range of special accessories, which are tailored to pre-defined applications and guarantee the best possible results for professionals.

FEIN prides itself on its application-based approach, which means it is known for providing trusted consultancy to its customers, enabling companies to source the best solution for the job. By providing the best quality and reliable products and expertise, FEIN delivers true value-for-money, every time.

Refresh.

Today FEIN is a world-renowned power tool manufacturer with 900 employees, 530 of whom work in Germany. FEIN holds more than 800 active industrial property rights, including around 500 patents and patent applications. FEIN markets its products through 20 international subsidiaries and more than 50 representations around the globe.
